All Island Waveski come outfitted with thin (1/4") seat pad.

There are also other thicker seatpads available. Thicker seat pads are used for comfort as well as raising your seat. A higher center of gravity is less stable but provides better performance.

Thick seat pads come in firm or soft.

You can also have your waveski outfitted with a kayak seat with a back brace for support. You would have to custom order your ski.

Different inserts are needed to mount the seat.
